

TapTec™

“Tap”

is inspired by the English word “tap” or, “faucet”, which comes from our original intention to help thousands of families achieve safe water use.

“Tec”

is derived from the 40 years of core technology of reverse osmosis water purification technology from the market-leading FilmTec™ brand. This technology can be used in whole-house water purification systems, such as kitchen water purifiers, household water purifiers, kitchen and beverage integrated machines, desktop direct drinking machines, pipeline machines, and water softeners.

“TapTec™”

is based on the key concept of “the core is more than pure”, which means that in addition to providing clean water, TapTec™ will continue to explore more ways to meet the needs of more consumers and improve the quality of life.

It is a **water purification engine,**

that provides a stronger “core” **for water**

purification throughout the house.

It is the shaper of the “core” technology for water purification in the industry.

It is committed to promoting the overall progress of the household water purification industry. It provides efficient and professional technology and after-sales support for millions of brands. It brings a beautiful, comfortable and healthy life to thousands of families. It will also continue to contribute its professional strength to the sustainable development of water resources.

TapTec – The core is more than pure.

Just like water, creating unlimited possibilities.
